PROGRAM OUTPUT SCREENSHOTS

Smart Campus Navigation System

Genuine terminal captures from the freshly compiled application. The screenshots show the actual menu, fictional demonstration map, Dijkstra output, BFS output, and path listing.

All sample place names and distances are fictional, as the application itself states. No image is a mock terminal or recreated output.

The original PNG captures are provided in the adjacent screenshots/ directory.

Figure 1

Figure 1. The compiled application launch menu. It lists the implemented location, path, Dijkstra, BFS, connectivity, demo-data, and exit actions.

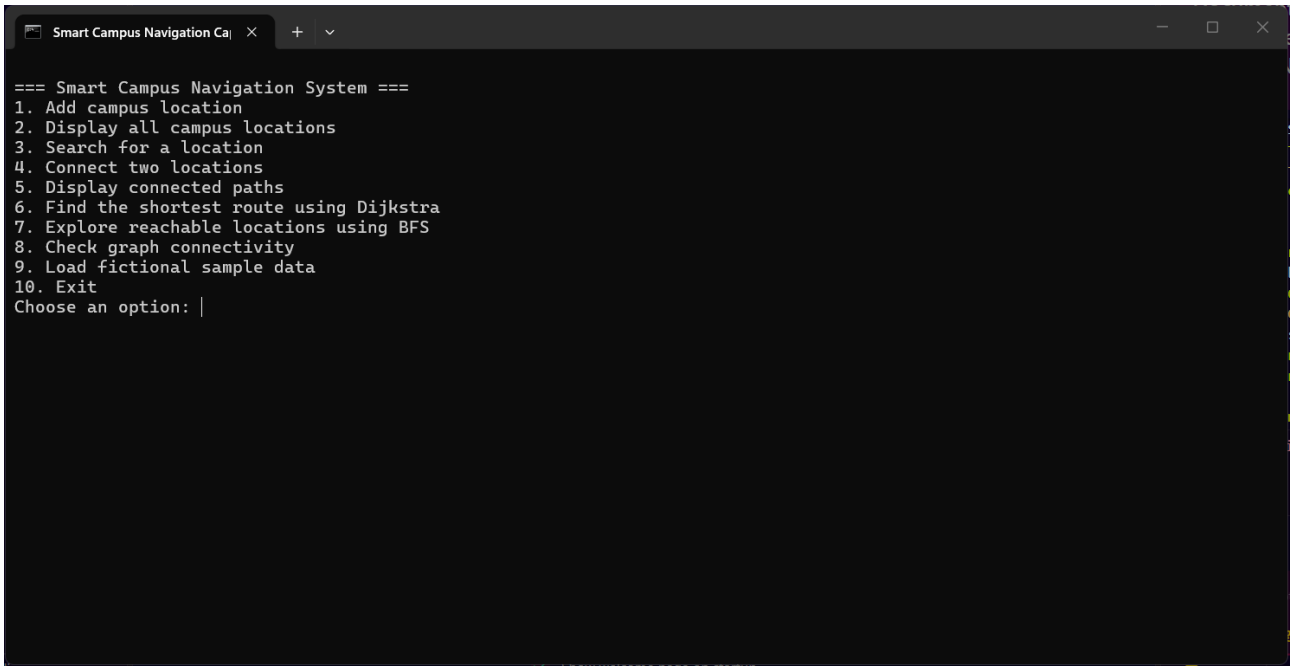

Figure 2

Figure 2. The explicitly fictional demonstration map loaded into the program and its five linked-list location records displayed.

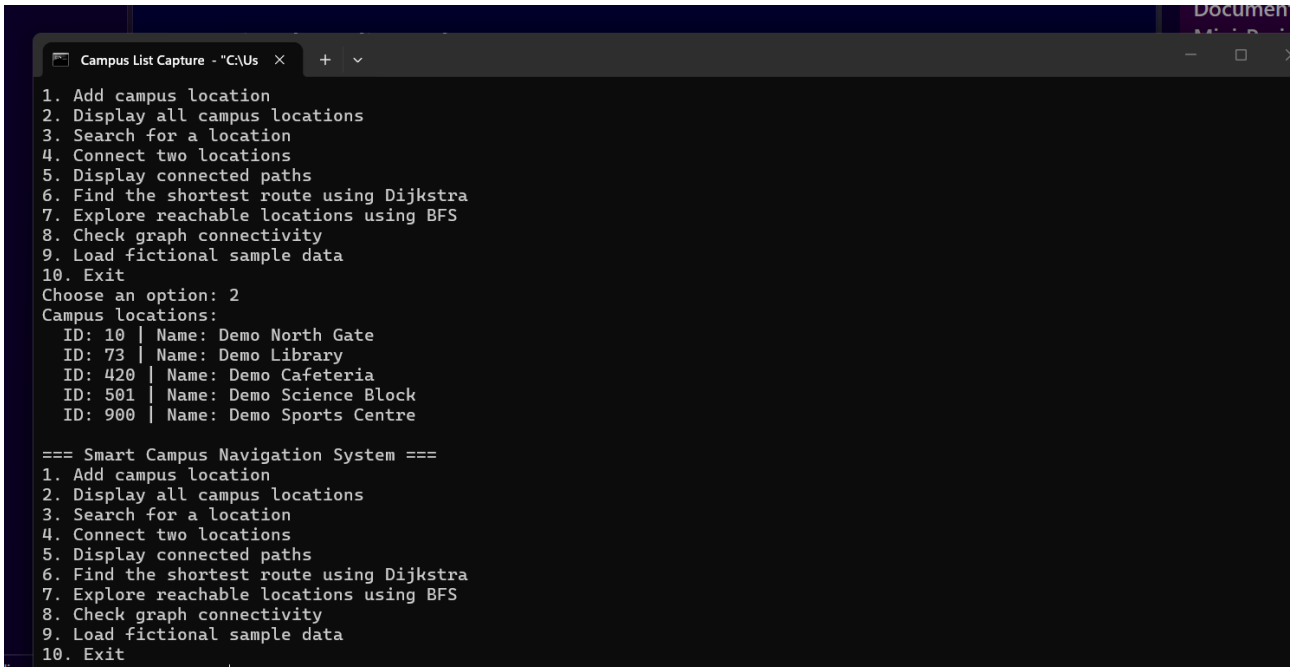

Figure 3

Figure 3. Dijkstra output for fictional sample IDs 10 to 900: 510 m via Demo Library and Demo Cafeteria.

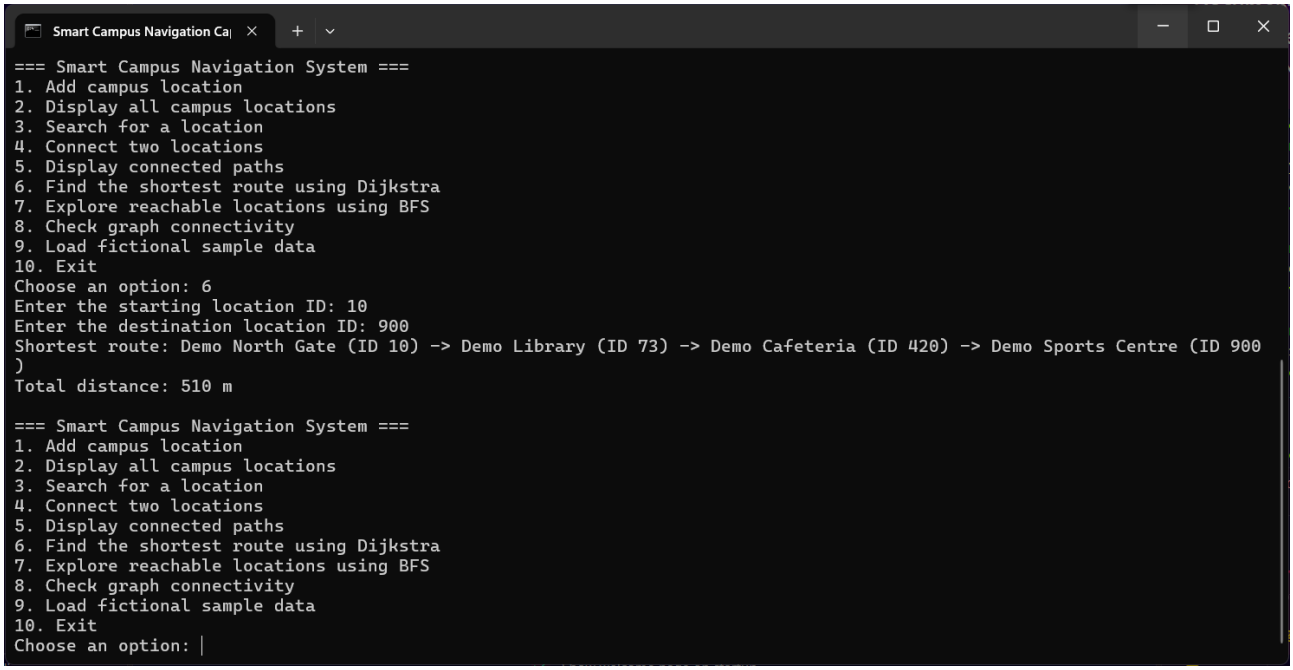

Figure 4

Figure 4. BFS from ID 10, showing the actual traversal order and reachability of destination ID 900.

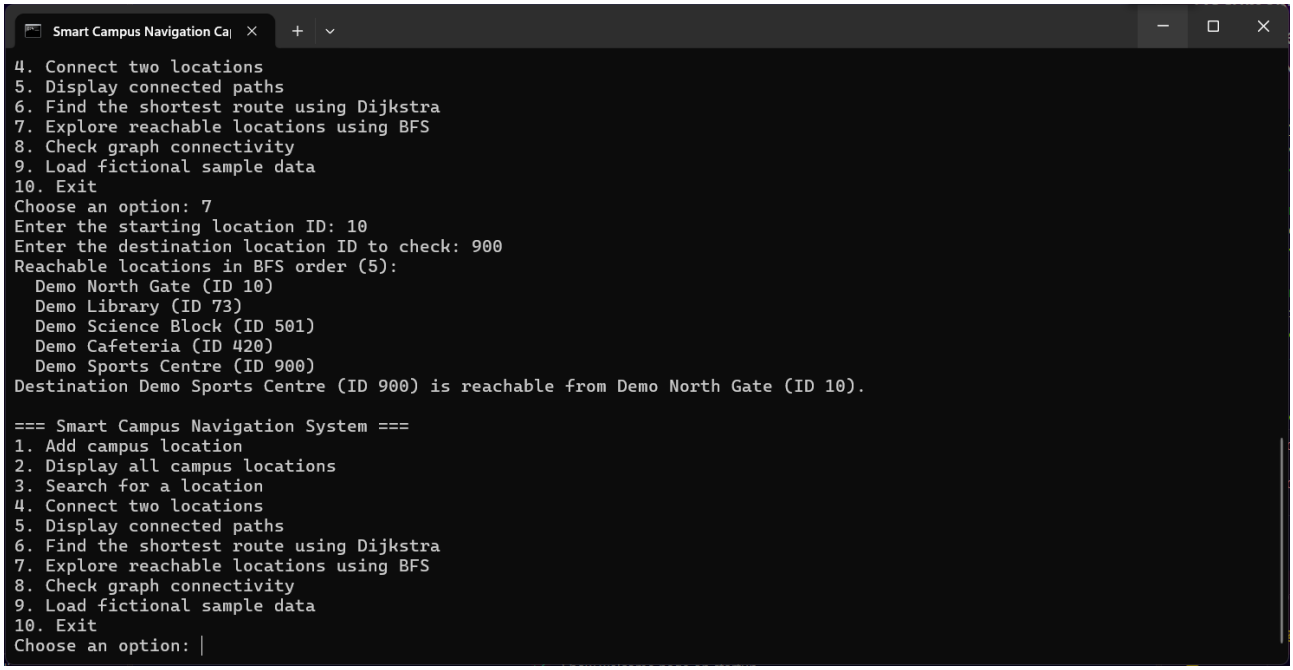

Figure 5

Figure 5. The seven undirected demonstration paths and their fictional distances in metres.
